Tutorial Questions

Course	: B.Tech	Course Code	: CST 444
Course Name	: Web Programming	Year & Semester	: 4th Year, 7

Academic Year: 2024-2025

Tutorial No : 9

Module No: 3

Topic:PHP

1. Develop a PHP program to print the factorial of a number using a function that accepts number as input and returns the factorial?

2. Develop a PHP program to do the following:
   I. I.Declare an associative array named "items" to store the key-value pairs ("Bread", 30), ("Butter", 30), ("Jam", 35), ("Cheese", 32).
   II. Print the array using for each loop
   III. Sort the array according to values maintaining the key-value relationships and print the sorted key-value pairs.

3. Design an HTML form for entering a number by the user. Write a PHP code to display a message indicating, whether the number is odd or even, when clicking on the submit button.
